

Release Summary

Product Name: Service Center

Team Name: Service Center Team

Date: March 8, 2025

As a recurring user, I want to be able to create an account and log in with my credentials so I can access my profile and other features.

Acceptance Criteria:

- Account creation with email, username, password, full name
 - Unique usernames (case sensitive)
 - eg) T3 and t3 are different usernames
- Onboarding feature
 - Users choose between Service Provider or Customer
 - Profile set up includes:
 - Description field (to introduce skills/services or preferences)
 - Location setting (to enable localized service discovery)
 - Option to edit profile details later
- Login feature
 - Able to login with username/email and password
 - Contains error handling for invalid credentials
- Password reset on login page sent via email

As a logged-in user, I want to be able to manage and edit my profile so I can update my personal information and display details about myself.

- Editable profile picture
- Editable location field
- Editable skills section
- Editable short biography section
- Ability to sign out

As an amateur service provider, I want to be able to advertise my services

Acceptance Criteria:

- Post creation with title, description, price, location, hashtags, and image
 - Price and hashtags are optional
- Post deletion for post owner only
- Comments under posts
- Ability to request a job for non-post owners and cancel requests
- Ability to see all job requests for post owner, and accept/reject requester
- Ability to view profile of job requesters

- Navigation from post to post owner's profile page
- Display post status (open, in progress, complete, etc)
- Increment/decrement posts on public profile

As a broke college student I want to find jobs so that I can make money doing peoples tasks

Acceptance Criteria:

- Search filter based on title
- Sidebar filtering based on location and hashtags
- Post bookmarking

As a small businessman I want to communicate with my clients so that I can stay on top of jobs

Acceptance Criteria:

- In app messaging that saves messages throughout sessions
 - Includes sending images
- User lookup by username
- Navigation from chat to user profile
- Conversation hiding
- Conversation searching based on username
 - Does not show hidden conversation

As a consumer, I want to rate a service to let others know if it's worth paying for.

Acceptance Criteria:

- Accepted user of a posts can either mark job as complete, or cancel the job
- When a job is marked as complete, post owner able to rate service
 - Includes stars (0-5), review title, review description
- Post becomes closed after review is sent
- Review is displayed on accepted user's profile
- Increment review count on public profile
- Be notified when my post has been marked as complete

As a Friendly Neighbor I want to find job postings that are in a reasonable distance from me

Acceptance Criteria:

- Users can set their profile location(allowing them to see by default posts near their location)
- When creating a post, users are able to set their location based on current location, a name, or by looking at a map.
- Users are able to set their search location(for posts displayed) to any location

- Users are able to set their search range to display posts closer/further from their search location

Known Problems

Bugs

Post Creation

- After creating a new post, in “Home” on the navigation bar, the image sometimes doesn’t display immediately, this can be fixed by scrolling down, then scrolling back up.
- Navigate to Profile to load it once, then create a new post, navigate to Profile. The new post will take the larger postcard, the 2nd newest post will move to the horizontal scroll, but the image will infinitely load until a user signs out and signs back in, or if they have enough posts to where they can scroll far enough to the right, then scroll back to the left, the image will load.
- If the newly created post is the ONLY post the user has made, the large postcard image will infinitely load until signing out and signing back in
- After clicking the “Create Post” button, there is a delay before navigation occurs, meaning the button can be clicked multiple times, making duplicate posts
- The hashtag search field is not cleared after creating a posts
- 20 word description minimum is not actually enforced

Saved Post

- Post image does not extend fully into postcard (by less than 20 pixels)

Account Registration

- If a user registers an account, signs out, then goes to register a new account, the fields are not reset
- If a user attempts to register with an email that already exists, the error won't show unless you click “Continue” in the next view that occurs after pressing “Create Account”
- The “Full name” field and “username” field has autocorrect on
- Pressing tab from the email field will make the screen jump up slightly
- On some user’s devices, the first page where you create a password, the password is covered by a yellow bar (ios 17.5)

Post Comments

- Replies to comments do not increment the comment count

Direct Messages

- If a conversation is deleted, and you attempt to search for the conversation again by username, the conversation will not appear

- New message receipts don't go away unless you respond

Postcard

Note: Postcard here can refer to both the blue postcards in "Home" and the single large post in "Profile"

This is a debug feature and has been disabled for the final release. The ellipses on the top right corner of a post was used to allow any user to delete a post. And exhibited these 3 scenarios when clicked

1. Button clickable -> confirms if user wants to delete post
2. Button clickable -> no action
3. Button unclickable -> post navigation takes over and user enters detailedPostView

Since the feature was disabled, the final release only exhibits scenario 2 and 3. The button has been left in despite having no functionality for future releases should the developer be so inclined.

The above bug can also affect the ability to like a post

- Title text can overflow infinitely and stretches the blue postcard
 - Can also be covered by the job status of the post
- Description field will cut text off, but can still stretch slightly
- Price field text can overflow infinitely and stretch the postcard in home and profile
- User can enter non-numerical numbers for a price
- Hashtag section leaves white box under description if left blank

Email Notifications

- In RequestsView, the email notifying a user that they have been accepted for a job can be sent multiple times if the post owner navigates to another user's profile within the view.

Post Interactions from ProfileView

- On some users' devices, attempting to interact with a post such as viewing requests or commenting crashes the app (ios 18.2)

Location

- In LocationMapView, users must click on get current location button twice for it to center in on the user's location

Omissions

Profile Pictures

Profile pictures have not been integrated with many parts of the app such as:

- Direct messages (message tab on the navigation bar)
- Postcards (PostListView and detailedPostView)

Posts Comments

- Comments are not collapsable, so if a user sends a really long comment, you have no choice but to scroll past it to add a new comment (not talking about replying)

Reviews

- A reviewer cannot edit or delete a review
- Reviews are posted from oldest to newest instead of the other way around

Notifications

- An email notification system exists but is not used in many parts where one would typically expect to be notified because the team was using email addresses that did not belong to them, so to avoid sending emails to 3rd parties, several parts of the app do not send notifications

Profile Viewing from messages

- Able to message yourself, and view yourself as if you are another user

Warnings

- Several warnings, many related to using outdated navigation feature left in app

Messages

- The red receipt won't go away unless you respond to a message.

Style Guide

- Did not use a linter to check for any violations

Design Shortcuts

jobStatusManager

- This manager was an attempt to fix a synchronous issue with the jobStatus of a post across different views, but likely does not work and should be removed

View model previews

- Not all previews have been kept up to date and require launching the whole app to see functionality

Github

- Continuous integration is broken and will always display a fail

Product Backlog

- Create new type of post specifically for Service Providers
 - Current system assumes post maker is asking for a service
 - Service Providing post should allow the buyer to rate the provider
- In app payment
- Filter based on job status of a post, clear all filters button
- Send video messages
- Switch to a single Email system (currently using two systems)
 - Firebase emails
 - Sendgrid emails
 - Use a company account for Sendgrid, currently tied to a personal phone number
- Allow recentering of profile image
- Display newest rating on profile instead of oldest first
- Block user feature
- Authenticate email belongs to registered user
- Change reviews created on a user's profiles to reviews given by other users
